

Aspen daisy

Erigeron speciosus

(ur-IDGE-er-on spee-see-OH-sus)

Oh, another aster.

Wait . . . what if the flowers are really big and a solid lavender, and flowering extends to late spring through summer, and the leaves are dark green and glossy, and the plant stands just 18 inches - would that ring the cash drawer open for another aster? Consider it done. No point in plowing over plowed ground when selecting for asters. Adding another one to the world requires an improvement. Ours is an improvement. Selections sought large 2-inch plus flowers having many narrow, lavender ray petals radiating from a bright yellow disc. Also sought: Extended blooming through summer; dark green, glossy foliage; and a controlled open habit. This is a plant everyone knows and takes for granted. Which is why this had to be special or it wouldn't be among the Native Roots selections.
