

Eriogonum compositum

Eriogonum compositum

Arrowleaf buckwheat

Eriogonum compositum

(air-ee-OGG-ih-num cum-POS-ih-tum)

Wouldn't you just love a plant that gave the impression of living in a Dr. Seuss book? It is common for visitors to make some unsolicited reference to Dr. Seuss when they happen upon this plant in bloom. A clump of large, spear-head-shaped leaves give rise to long stems topped by huge umbels of dark yellow flowers, each one looking like nothing if not a cloud-like the famed Truffula tree.

Native Roots

Native Roots

The unique form and bright color make this a stunning plant for a dry garden. After bloom, the plant is simple to deadhead and the leaves remain vibrant and attractive for the remainder of the summer. In fall, the leaves take on subtle shades of red and purple. Buckwheats, in general, are fabulous but overlooked landscape plants and this is one of the best of the genus.

Height: 15to 20 inches in bloom.
Diameter: 20 to 25 inches in bloom.

Requires full sun.

Prefers coarse to medium, well-drained soils.

Available in Seed and Liner Plugs to Licensed Growers

Suitable for 1 gallon pots.
