

Hymenoxys acaulis

Sundancer daisy

Hymenoxys acaulis

(hye-men-NOCK-siss ay-KAWL-iss)

This plant is drought resistant and adaptable. Blooming all season long, sundancer daisies are entirely underutilized in Western landscapes today.

Nothing looks as pretty as blooming yellow daisies

waving in the breeze on their long and sturdy stems all season long. Sundancer daisies can be found growing in most climates in the west. They offer bullet-proof performance. If you need a plant that will grow reliably for your client, *Hymenoxys acaulis* is one of them. The foliage is a low, mat of long gray-green leaves and grows well in most soil types except saturated soils. Tolerates a wide range in pH and salinity.

Native Roots

Height: 12 to 24 inches. Diameter: 12 to 14 inches.

Full sun to part shade.

Available in seed and plugs.

Suitable for 6-inch and 1-gallon pots.
