

Mirabilis multiflora

Mirabilis multiflora

Desert 4 o'clock

Mirabilis multiflora

(mih-RAB-ih-liss mul-tih-FLOR-uh)

Stumbling across a blooming Desert 4 o'clock while hiking is a special thing. They look out of place in the desert – oddly lush, almost tropical, and certainly exotic. It's an impression that leads us to think this trailing plant will serve two important markets for you. Foremost, the demand for the unusual. Additionally, because Desert 4 o'clocks cover a large area inexpensively and require little maintenance, it's a valuable plant for customers on a budget with limited time. Perfect for improving a dry wash bank, irrigation ditches, or steep hillsides. The profuse trumpet-shaped magenta flowers open in late afternoon – hence the name. Selection efforts increased winter hardiness. Based on the survival rate of our stock plants, we're confident the goal was achieved.
