

Penstemon confertus

Penstemon confertus

Yellow penstemon

Penstemon confertus

(pen-STEE-mun kun-FUR-tuhs)

Penstemons aren't often yellow. Ours exhibits pale yellow flowers on numerous 24" stems over a mat of dark green lanceolate leaves. An early and prolific bloomer, flowers are displayed along slender spikes rising up from the base of very uniformly mounded plants. This penstemon expands the color palette of this versatile genus and will add a bright spot to partially shaded areas.

Native Roots

Native Roots

Height: 15-20 inches.
Diameter: 18 inches.

Prefers coarse to fine soils that are slightly acidic and well-drained. Does best in filtered light to part shade and should be watered relatively well for an intermountain species.

Available in seed and plugs.

Suitable for 4-inch and 6-inch pots.
