

*Salvia pachyphylla*

*Salvia pachyphylla*

# Giant purple sage

## Salvia pachyphylla

(SAL-vee-uh pak-ee-FIL-uh)

This is a plant for the post-apocalypse – or the southwest side of a home. Few plants require so little and deliver so much. Most notable for having lengthy, deep-blue flowers that persist from midsummer to frost, this is a fragrant, all-season performer maintaining light gray, evergreen foliage covering a 30-inch mound. It also draws hummingbirds and butterflies. Selections were made for compactness to refine its natural ranginess, although it will accept shearing in fall to maintain a tight appearance. Selections were also made to enrich the blue flowers. Giant purple sage grows in most well-drained soils, but is found native to alkaline clay. A xeric, compact, flowering evergreen requiring little maintenance that draws hummingbirds is just what we'll all need.
